

Imrankhan Mohamed Hanifa

Senior Software Engineer

Java · Spring Boot · Kafka · AWS · Microservices

Kanyakumari, Tamil Nadu, India | +91 9092051500 | imrankhanmohamedhanifa@gmail.com

imraaimmu.github.io | linkedin.com/in/imrankhan-mohamed-hanifa-b50580148

9+ years backend engineering · 60% lower Kafka volume and cost · 150% faster API execution · sub-150 ms event latency · 100% to ~23% Redis memory recovered · 8+ engineers mentored

PROFESSIONAL SUMMARY

Senior Software Engineer with 9+ years designing scalable Java platforms, REST APIs and event-driven microservices across retail, supply chain, investment banking, payments and healthcare. Strongest in configuration-driven architecture, Kafka pipelines, AWS modernisation, production reliability and performance optimisation, with end-to-end ownership of a published multi-tenant SaaS product. Available immediately for remote roles in India or Gulf relocation with visa sponsorship.

TECHNICAL SKILLS

Backend: Java 8/11/19, Spring Boot, Spring Boot 3, Spring Cloud, Spring MVC, Spring Data, Hibernate, REST APIs, Microservices, SQL, Data Structures and Algorithms

Event streaming and data: Apache Kafka, Avro, Schema Registry, Redis, AWS ElastiCache, Apache NiFi, Oracle, PostgreSQL, MySQL, MongoDB, Cassandra, Firestore, SecDB

Cloud and DevOps: AWS Lambda, API Gateway, EventBridge, S3, DynamoDB, Step Functions, CloudFormation, CloudWatch, SNS, Terraform, New Relic, Splunk, PagerDuty; GCP Cloud Run, Cloud Functions, Cloud Scheduler, IAM; Firebase; Docker, Kubernetes, Jenkins, GitLab CI/CD, Bamboo, GitHub Actions, CI/CD

Architecture and reliability: Distributed systems, event-driven architecture, multi-tenant security models, configuration-driven design, idempotency and deduplication, schema evolution, dead-letter queues, fail-fast validation, audit and SOX-safe state handling, low-latency tuning, observability and latency/consumer-lag monitoring, on-call incident response, production incident diagnosis

Quality and AI-assisted delivery: JUnit, SonarQube, Cucumber BDD, JMeter, Vitest, regression automation, Firebase emulator testing, Claude Code for reusable engineering skills

Frontend and mobile: Flutter, Dart, React, Next.js, TypeScript, JavaScript ES6, HTML, CSS

Ways of working: Agile and Scrum delivery, mentoring, stakeholder communication, requirement gathering; Git, GitLab, Bitbucket, Maven, Gradle, Jira, Tomcat

PROFESSIONAL EXPERIENCE

Senior Software Engineer (Contract)

05/2025 - 06/2026

Nordstrom via Spectraforce Technologies · Retail and Supply Chain

Java, Spring Boot, Kafka, Redis, ElastiCache, Avro, Schema Registry, Terraform, PagerDuty, Docker, Kubernetes, CI/CD

Configuration-driven inventory platform

- Spearheaded migration of the enterprise inventory pipeline from hardcoded legacy processors to a **V2 configuration-driven decorator architecture**, enabling business-rule updates across diverse fulfillment nodes **without deployments**. Sustained **roughly 300k inventory records on a typical day and up to 1.2 million at festive peak**, at **sub-150 ms end-to-end latency**.
- Engineered a **deterministic transition-rule engine** for event splitting, converting physical warehouse movements into logical financial transactions; integrated Janus commercial and Segmentation routing APIs for multi-tenant Kafka routing.
- **Cut downstream Kafka volume and processing cost by up to 60%** with Redis-backed stateful deduplication that filters logical no-op updates.
- Established an **Immutable Wall** state-management pattern using Java deep copies to protect raw warehouse audit trails and **support SOX controls**, with fail-fast validation and DLQ routing to quarantine unmapped inventory during downstream API outages.
- Built reusable **Claude Code onboarding skills** that cut new-location configuration and validation work **from weeks to hours**.
- **Mentored two engineers** on the inventory platform team.

Production reliability and incident response

- Diagnosed a **framework-level memory leak that two previous efforts had missed**: a production ElastiCache for Redis cluster hit 100% memory daily and collapsed to a 0% hit rate, pushing full load onto the primary database. Root cause was Spring Data Redis secondary indexes, since managed Redis disables keyspaces notifications and millions of expired @RedisHash IDs were left orphaned in indexed Sets.
- Built a **non-blocking cleanup** using cursor-based SSCAN in 500-key batches with pipelined existence checks and SREM, discovering keyspaces from @RedisHash repositories in the Spring context so new caches are covered automatically.
- **Took peak memory from 100% to roughly 23% and cache hit rate from 0-30% to over 85%** via activedefrag and a tuned maxmemory-policy in a Terraform-managed parameter group, with no cluster restart.

- **Configured PagerDuty alerting from scratch** - services, escalation policies and notification rules - alongside a nightly preventative job and a CloudWatch and SNS alarm at 80% memory, and **took part in the on-call rotation** responding to latency, consumer-lag and failed-event alerts.

Senior Software Engineer

04/2024 - 02/2025

Goldman Sachs via Apexon Pvt Ltd · Birmingham, UK · Investment Banking

Java 19, Apache NiFi, SecDB, Alloy, Kafka, New Relic, Docker, Kubernetes, Microservices

- Built **transaction-validation controls** for Controls Engineering that screened **millions of trade and reference-data records** against firm-defined rules, flagging breaks for investigation before they reached downstream reporting.
- Developed **alerting workflows** that routed detected breaks to the owning control teams, replacing manual review steps in the validation chain.
- Delivered a **file-loader service** that ingested inbound files and published them to Kafka for downstream consumers, standardising a previously bespoke intake path within a regulated change and release process.
- Monitored pipeline health on **New Relic dashboards**, tracking processing latency and Kafka consumer lag to catch degradation before it reached downstream control reporting.

Senior Software Engineer

08/2021 - 04/2024

Global Payments via UST Global · Leeds, UK · Payments

Java 19, Spring Boot 3, AWS Lambda, S3, Kafka, Oracle, PostgreSQL, React, CI/CD

- **Improved API execution speed by 150%** while modernising on-premise legacy applications into AWS cloud services and delivering new Quick Remit operations.
- Developed a **Kafka-listener billing service** that captured events, generated billing files and uploaded outputs to Amazon S3.
- Created **Cucumber-based regression automation** supporting continuous deployment, and migrated the database from PostgreSQL to Oracle for the Quick Remit beta.
- **Mentored a junior developer**, coordinated technical requirements with stakeholders and delivered React features.
- Helped build Jenkins CI/CD pipelines, automated repetitive Git workflows and operated services on Docker and Kubernetes.

Senior Software Engineer

10/2020 - 08/2021

Sri Mookambika InfoSolutions Pvt Ltd · Chennai, India · Healthcare

Java 11, React, AWS Lambda, Step Functions, CloudFormation, CloudWatch, S3, CI/CD

- Designed and developed a **hospital visitor-screening kiosk** with badge workflows, a React UI and REST APIs on AWS Lambda.
- **Led R&D** for camera capture, driving-licence scanning with ZXing, Dymo badge printing and Raspberry Pi/MQTT temperature-sensor integration.
- **Designed the AWS architecture from scratch** with CloudFormation and built Bamboo deploy pipelines from Bitbucket to AWS.

Full Stack Developer

07/2016 - 10/2020

IVTL Infoview Technologies Pvt Ltd · Chennai, India · Supply Chain and Expense Management

Java 8, Spring MVC, Spring Boot, Hibernate, MySQL, PostgreSQL, Cassandra, Java Swing, JavaScript

- Built internal products including **iShot**, a screenshot and screen-recording tool, and an employee late-leaving approval system, and helped **modernise a legacy Delphi desktop application into a Java-based web platform**.

INDEPENDENT PROJECTS

FitTrack and Fittie - multi-tenant gym management SaaS

2025 - Present

Independent product · Solo architect and engineer · Live on Google Play

Flutter, Dart, Firebase, Cloud Functions, Firestore, Next.js, TypeScript, React, GCP, GitHub Actions

- **Architected and shipped a three-surface platform end to end**: gym-owner and member Flutter apps published on Google Play, plus a Next.js platform dashboard, on one documented Firestore contract with 11 Cloud Functions.
- Designed a **callable-only security model** in which the browser never queries the database directly; every platform read passes a super-admin custom-claim check, with PII masking and recursively redacted audit logging.
- Built an **idempotent check-in transaction** using per-visit scoped receipts and a lost-response settle window, eliminating duplicate attendance, presence and occupancy writes.
- Ship production releases with **no stored credentials** using GitHub OIDC, approval-gated deploys, canaries and automatic rollback to the last known-good commit.

EDUCATION

Bachelor of Engineering, Computer Science and Engineering

2012 - 2016

Mohamed Sathak Engineering College, Kilakarai, Tamil Nadu · CGPA 8.1/10 · Best Student of the Year 2015-2016

CERTIFICATIONS AND AWARDS

Certifications and leadership development: Achieving Leadership Potential Series (ALPs), UST · Servant Leadership, UST

Awards: Best Student of the Year 2015-2016 (ISTE) · Audience Choice Award, UST Foundation Day 2022 · Best Paper Award 2015
